

# SafeStick® FlashID

## Encryption meets Authentication

**A Secure USB Flash Drive with Hardware Encryption and Strong Authentication. With SafeStick® FlashID you can securely access remote resources with OTP and bring information securely with you. The product combines two-factor authentication and an encrypted file storage of up to 64GB.**

SafeStick® secures stored information in an instant and user-friendly way. The onboard Deepnet FlashID authentication software provides strong, two-factor authentication and binds the user's identity to the user's SafeStick.

### 2 in 1 - Storage and Authentication

With SafeStick® FlashID you can take information securely out of the work place. You can then connect to the office and identify yourself securely and gain access to Outlook Web Access, Citrix Web Interface and other resources.

### Benefits & Features

All stored information and user credentials on the SafeStick® FlashID is automatically encrypted and password protected in accordance with industry standards.

### Portable

With SafeStick® FlashID you can leave the heavy laptop behind and bring your secured information home or access it remotely.

### User-friendly

No installations are needed to use the SafeStick® FlashID. All software is securely stored onboard the SafeStick® encrypted USB flash drive.

SafeStick® FlashID is the result of a collaboration between two security innovators: BlockMaster and Deepnet Security. The product is available from Softek—The distributor for both BlockMaster and Deepnet Security.
